			MAIL DATE	DELIVERY MODE
			09/05/2007	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

	Application No.	Applicant(s)				
Office Action Summan	10/658,553	TSAI, FRANK				
Office Action Summary	Examiner	Art Unit				
	Noah C. Hawk	3636				
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).						
Status						
1)⊠ Responsive to communication(s) filed on 30 Ju	lv 2007.					
	action is non-final.	•				
<i>'</i> =	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is					
closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.						
Disposition of Claims						
4)⊠ Claim(s) <u>58-69</u> is/are pending in the application						
	4a) Of the above claim(s) is/are withdrawn from consideration.					
5) Claim(s) is/are allowed.						
6)⊠ Claim(s) <u>58-69</u> is/are rejected.						
7) Claim(s) is/are objected to.	· ·					
8) Claim(s) are subject to restriction and/or	election requirement.					
		•				
Application Papers						
9) The specification is objected to by the Examiner.						
10)☐ The drawing(s) filed on is/are: a)☐ accepted or b)☐ objected to by the Examiner.						
Applicant may not request that any objection to the	drawing(s) be held in abeyance. See	e 37 CFR 1.85(a).				
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).						
11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.						
Priority under 35 U.S.C. § 119	•					
12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some * c) None of:						
1. Certified copies of the priority documents have been received.						
2. Certified copies of the priority documents have been received in Application No						
3. Copies of the certified copies of the priority documents have been received in this National Stage						
application from the International Bureau (PCT Rule 17.2(a)).						
* See the attached detailed Office action for a list of the certified copies not received.						
Attachment(s)						
1) Notice of References Cited (PTO-892) 4) Interview Summary (PTO-413)						
2) Notice of Draftsperson's Patent Drawing Review (PTO-948) 3) Information Disclosure Statement(s) (PTO/SB/08) Paper No(s)/Mail Date 5) Notice of Informal Patent Application

DETAILED ACTION

Page 2

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/30/07 has been entered.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 58, 59 and 67 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stanford in US Patent 6112674 in view of Pinch in US Patent 6058853 and Palmer in US Patent 4825781. Stanford teaches a table comprising a tabletop (12) comprising a plastic made and substantially rectangular top panel (13), two tabletop supports (42,44) longitudinally supported under the top panel along side portions thereof, a pair of table supporting frames comprising a leg frame (18, 20) with an upper end portion (88) and a supporting means having a folding frame (100) and supporting arms (24,30) with a

Art Unit: 3636

lower retention portion (104), and an upper portion (36) having outer ends pivotally mounted at the tabletop supports such that the supporting arms are transversely extended underneath the tabletop at a midpoint of the panel. Stanford further teaches that the folding frame has two ends (26) pivotally connected with the retention portions of the supporting arms and that the folding frames are pivotally connected to the leg frame (best seen at the outer ends of members 100). Stanford fails to teach two receiving tracks in the under side of the table top. Stanford fails to teach a pair of receiving tracks defined in the underside of the tabletop by a surrounding rim having an inner and outer sidewall. Pinch teaches a surrounding rim downwardly extended from the tabletop having an outer sidewall (176) and an inner sidewall (152) that define a receiving track wherein table supports (166) are securely mounted. It would have been obvious to one of ordinary skill in the art at the time of invention to modify the tabletop of Stanford by adding a receiving track formed by a surrounding rim with an inner and outer sidewall as taught by Pinch in order to provide a more secure mounting means for the tabletop supports. Stanford, as modified, fails to teach that the supporting means comprises two L-shaped supporting arms. However, the arrangement of two L-shaped supporting arms next to each other would form a T-shaped supporting assembly, which is what the supporting assembly of Stanford shows (elements 24/30 and 36 form a Tshaped support). Palmer teaches a supporting frame (A) with two L-shaped arms (formed by portions 3 and 4 of frame A) having parallel portions and forming a T-shaped assembly. It would have been obvious to one of ordinary skill in the art at the time of invention to modify the support of Stanford, as modified, by using an assembly of L-

Art Unit: 3636

shaped arms as taught by Palmer in order to provide more structural rigidity to the tabletop and to provide more legroom under the table.

4. Claims 60, 61, 65 and 68 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stanford, as modified, as applied to Claim 59 above and further in view of Witkowiak in US Patent 2695828 and Pinch. Stanford, as modified, fails to teach an attachment arrangement comprising attachment members and mounting members. Witkowiak discloses mounting foldable leg frames to a supporting siderail using attachment members (16) extending from the siderail that are inserted into the leg frames (see Witkowiak, Fig. 2) but does not disclose four attachment members and four coupling members. It would have been obvious to one of ordinary skill in the art at the time of invention to modify the device of Stanford, as modified, by using an attachment arrangement of members extending from the siderail to be inserted in the frame segments as taught by Witkowiak, and in an appropriate number to accommodate all of the frame segments that needed to be attached in order to provide a more secure mounting means for the support members. Stanford, as modified, fails to teach a plurality of guiding slots in the inner sidewall of the surrounding rim to align with the attachment members and coupling members or that the tabletop is foldable. Pinch teaches a plurality of guiding slots (160) formed on the inner sidewall of the surrounding rim to align with an attachment arrangement (in this case, the attachment and coupling members). It would have been obvious to one of ordinary skill in the art at the time of invention to modify the inner sidewalls of Stanford, as modified, by using guiding slots therein, as taught by Pinch, in order to provide a means to more positively align the

Art Unit: 3636

arms of the leg frames and supporting frames with the attachment and coupling members on the tabletop supports. Pinch further teaches a tabletop comprising a folding joint (164) formed between supporting portions of the supporting frames. It would have been obvious to one of ordinary skill in the art at the time of invention to modify the tabletop of Stanford, as modified, by using a folding tabletop as taught by Pinch in order to make stowage of the device easier when not in use. Stanford, as modified, further teaches a ring shaped locker (108) slidably mounted to the supporting arms.

5. Claims 62, 63, 66 and 69 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stanford, as modified, as applied to claim 59 above and further in view of Pinch. Stanford, as modified, further teaches an attachment arrangement comprising holes in the tabletop supports (ref 46. and column 14, lines 5-7) to receive the ends of the leg frames and the supporting members. Although Stanford doesn't teach a specific number of attachment holes, it would have been obvious to one of ordinary skill in the art at the time of invention to modify the device tabletop supports of Stanford, as modified, by using a appropriate number of holes in the tabletop supports in order to accommodate all of the arms of the table supporting frames. Stanford, as modified, fails to teach a plurality of guiding slots in the inner sidewall of the surrounding rim to align with the attachment holes or that the tabletop is foldable. Pinch teaches a plurality of guiding slots (160) formed on the inner sidewall of the surrounding rim to align with an attachment arrangement. It would have been obvious to one of ordinary skill in the art at the time of invention to modify the inner sidewalls of Stanford, as modified, by using guiding slots therein, as taught by Pinch, in order to provide a means

Art Unit: 3636

to more positively align the arms of the supporting frames with the holes in the tabletop supports. Pinch further teaches a tabletop comprising a folding joint (164) formed between supporting portions of the supporting frames. It would have been obvious to one of ordinary skill in the art at the time of invention to modify the tabletop of Stanford, as modified, by using a folding tabletop as taught by Pinch in order to make stowage of the device easier when not in use. Stanford, as modified, further teaches a ring shaped locker (108) slidably mounted to the supporting arms.

Page 6

6. Claim 64 is rejected under 35 U.S.C. 103(a) as being unpatentable over Stanford, as modified, as applied to Claim 59 above and further in view of Pinch. Stanford, as modified, fails to teach that the tabletop is foldable. Pinch further teaches a tabletop comprising a folding joint (164) formed between supporting portions of the supporting frames. It would have been obvious to one of ordinary skill in the art at the time of invention to modify the tabletop of Stanford, as modified, by using a folding tabletop as taught by Pinch in order to make stowage of the device easier when not in use.

Response to Arguments

- Applicant's arguments filed 7/30/07 have been fully considered but they are not 7. persuasive.
- 8. In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention

Art Unit: 3636

where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988)and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, the Stanford reference teaches a T-shaped supporting assembly (elements 24/30 and 36) which is considered equivalent to a pair of L-shaped arms arranged next to each other (as is taught by Palmer). The replacement of one with the other is considered obvious to one skilled in the art.

9. In response to the applicant's arguments regarding the Pinch reference. Pinch is used only as a teaching for the folding aspect of the tabletop, not the attachment arrangement, or reinforcement of the folding structure.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Noah C. Hawk whose telephone number is 571-272-1480. The examiner can normally be reached on M-F 9am to 5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Dunn can be reached on 571-272-6670. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
